How to create a high impact immersive learning experience utilizing Storyline and 3D rooms:

We created a mixed reality without the use of full AR/VR and provide learners with hands-on experience in a simulated environment to practice and develop job-specific skills

Demonstrates:

- Multiple use-cases where users learn their role, the roles of the partners they interact with, and the guardrails that guide their interactions

Includes:

- Knowledge checks to evaluate learning
- Survey questions embedded into the experience to gauge learners' initial feedback and measure knowledge retention
